

“American Filtration and Separations Society’s
Updated Test Standards Database”

By; Gerard J. Lynch – President
IFST, International Filter Testing Services
Springfield, New Jersey USA

Presented here is the newly updated and revised AFS Test Standards Database. The Test Methods Committee of the AFS has compiled an online database of international test standards applicable to the filtration industry. During this interactive session attendees will review, search and recommend improvements to the system. Recommended task items for improvement will be a deliverable of our interactive session.

The website location for this interactive database is:
<http://www.afssociety.org/resources/testingstandards090507.html>

Searchable by title, number, industry market segment, and standards organization, the AFS Test Standards Database will have direct links to most world class standards organizations including: AFNOR, ANSI, ASHREA, ASME, ASTM, BSI, CEN, DIN, IFPE, ISO, NFPA, NIOSH, NSF, SAE, TAPPI, UL..... The database has been an immense undertaking and will remain a living system which will be updated with additions, corrections and clarifications on an ongoing basis. The AFS Standards Database will be managed by the AFS Test Methods Committee.

AFS sees this as an import work aimed to provide end users as well as filter developers with a unique view of the various industries and standards governing the filtration world.
