

Chad S. Whiteman

BIOGRAPHY

Technology Evolution due to Clean Air Regulations for Coal-Fired Power Plants

Chad S. Whiteman is the deputy director for the Institute of Clean Air Companies (ICAC), which is the national association of air pollution control manufacturers. Chad's current responsibilities at ICAC include promoting the understanding of air pollution control technology's capabilities and their future markets under current and future federal, state, and local regulations. Prior to joining ICAC, Chad worked in the U.S. EPA's Office of Air developing and implementing acid rain and ozone control regulations for power plants and large industrial sources. While working for the U.S. EPA, Chad contributed to the development of regional and national, market-based cap-n-trade programs including the Acid Rain Program, NO_x SIP Call, and the Clean Air Mercury Rule. Mr. Whiteman received a B.S. in Civil Engineering (1993) and an M.S. in Environmental Engineering (1995) from West Virginia University.
