

Water in Crisis – An Overview of the Global Water Problem”
Lew Osterhoudt

Abstract:

This talk will provide an overview of the global water supply crisis. Information will be provided on both the water shortage problems, and on the new contaminants that are being discovered in the drinking water supply. Current examples will be pulled from recent headlines to provide up to the minute reports on the problem. Also discussed are some on-going efforts to identify, define and explore potential solutions to the problems.
