

Emergency Response: Is the Filtration Industry Prepared?

Anita K. Highsmith

Highsmith Environmental Consultants, Inc.,

Atlanta, GA 30329

404-636-6886 akhwater@aol.com

Emergency response is defined slightly different by each of us in the audience. It depends on life experiences, academic training, geographical location, and the workplace. During an emergency response, the filtration industry has a unique opportunity to provide product(s) for the health and safety in this county and abroad during uncertain times.

Examples of how industry can set up an emergency preparedness program to ensure that materials are shelf ready includes: identifying areas of interest and expertise; evaluating multiuse of the product; and, determining mode of delivery.

This talk will provide a practical approach to examining unmet needs in the healthcare arena, the community/environment, and the home. Focus is primarily on product development and use during day-to-day conditions, as well as needs resulting from a climatic event and/or actual or potential threat.
