## **Graywater Reuse Technologies**

Status: Pending

Category: 1 Water Filtration

Peter Cartwright

*Cartwright Consulting Co., Bloomington, MN, United States*

As a consequence of the increasing importance of water conservation and reuse, graywater recovery and reclamation of residential, institutional and commercial wastewater is becoming more critical. The outcomes of this activity will help mitigate water shortage issues and reduce the volume of wastewater to POTW facilities or septic systems.

This presentation addresses water shortages issues, and describes wastewater quality and quantity characteristics from domestic water usage.

The appropriate treatment technologies are addressed for each reuse activity, and discusses current and future regulatory restrictions.

Bio

Peter Cartwright is a consulting engineer with 36 years of experience in the water and wastewater treatment industry. He has had his own consulting engineering firm since 1980.
