

A Novel Technology for Multi-Phase Liquid Treatment

Graeme Pierce¹ and Nii Mensah²

^{1,2}Fibra Ltd., UK

The objective of this presentation is to introduce the innovative Fibra filter technology. The presentation will cover the key elements of the technology as well as discuss current and potential commercial applications. The initial application of the Fibra filter has been in the cleanup of precast concrete wastewater for discharge – the ability of the Fibra filter to both filter and adjust pH efficiently is a key driver for this sector.

The Fibra filter technology is readily applicable to a range of other industries including oil & gas and water treatment. We are currently seeking development and manufacturing partners to deploy the technology in a range of solutions and applications.
