Abstract

Cummins Power Generation, a business unit in Cummins Inc., is a global leader dedicated to increasing the availability and reliability of electric power around the world. With 90 years of experience, its global network delivers innovative solutions for any power need — commercial, industrial, recreational, emergency and residential. Whether the need is for prime power in underdeveloped regions of the world, for standby power in office buildings, or for emergency power following a natural disaster, power must be available when needed. Good filtration is essential to achieving this goal. By incorporating Six Sigma processes into its customer focused culture, Cummins Power Generation is a worldwide leader in providing available, reliable electric power under virtually all conditions. Using examples from the filtration world, this talk will discuss how Six Sigma permeates all aspects of our business and how customers and Cummins benefit.
